An Economic Analysis of Passage of Circus Legislation Restricting Training Methods Utilized on Elephants

Jennifer Fearing¹

Legislation has been introduced in various states which seek to limit the training and restraint devices used when housing, possessing, or traveling with elephants utilized in a circus or traveling show.²

The purpose of this report is to provide insights concerning the economic impact, if any, of this type of legislation. As such, the report will demonstrate the following:

- Legislation prohibiting training devices utilized on traveling elephants does not prohibit any amusement event from taking place in a state.
- If certain events do not take place because parties affected by such legislation elect not to tour in the state, and continued demand exists for circus-type amusement events, the market will respond and other events will come to the state, replacing any lost economic activity.
- Alternatively, local economies within a state may see improved economic activity if family spending shifts away from touring events owned and operated by non-residents and toward resident events and activities.
- The state will experience no economic loss in the absence of amusements that may choose not to operate in a state if this type of legislation is enacted.

¹ Jennifer Fearing currently serves as Chief Economist of The Humane Society of the United States. From July 1995 through June 2003, she was employed as a professional economist for a national economic research and consulting firm based in Los Angeles. Ms. Fearing's primary responsibilities were to provide economic research and complex damage analysis in the framework of expert witness litigation involving government and commercial entities on antitrust, intellectual property and fraud matters. Her principal fields are applied microeconomics and industrial economics – including the study of markets, consumer and price effects and the strategic behavior of firms. Ms. Fearing holds a Bachelor of Arts in Economics with highest honors from the University of California, Davis and a Master of Public Policy with an emphasis on Business and Government policy from the John F. Kennedy School of Government at Harvard University.

- To the extent there is no adverse impact on local or state economies, such legislation cannot adversely impact the national economy.

The Economics of Events

The local economic activity generated by an event staged at any one of the arenas or facilities hosting a traveling show or circus featuring elephants derives from four sources: (1) spending to attend the event (e.g., tickets and parking); (2) spending on concession items sold during the event such as popcorn and t-shirts; (3) spending before and after the event on other consumable items like meals or gas; and (4) taxes paid to local government on spending for these three categories. An indirect source of economic activity is any jobs created by this spending.³

Three important caveats should govern evaluations of the economic activity of such an event. First, spending generated at or by the event can only be considered a benefit to the local economy if the spending would not have taken place in the absence of the event. Second, only that portion of the spending that stays in the local economy can be counted as providing a local benefit. Finally, all benefits must be weighed against the direct and indirect costs (including the opportunity costs) of holding the event. These caveats are routinely ignored by those who favor specific events, namely because their consideration – and thus a complete economic picture – will offset any private gains accruing to the event’s owners.

The most relevant literature for considering the economic impact of performing events is that which deals with the economics of arenas and sports stadiums.⁴

Economists roundly agree that these venues do not generate new economic spending

³ Job quality/types can vary from permanent full- and part-time jobs for residents, temporary jobs for residents and income paid to the show’s performers (non-resident full- and part-time).

⁴ See Exhibit 1 for a brief bibliography of this literature.

in a region – they only redistribute the discretionary spending of families to different owners of capital.⁵

This finding is based on the conclusion – based on dozens, if not hundreds of studies – that arenas and the events staged there do not tend to attract significant proportions of tourists and visitors (e.g., non-residents). Any new economic activity must be generated by new spenders visiting from outside the local area. Without such spending, no additional tax revenue is generated and oftentimes local business owners who operate complementary or substitute efforts in other parts of the region will lose whatever the new venue gains – making it a wash for the region and specifically deleterious to those local businesses not operating in the venue’s immediate vicinity.

All too often, economists have trouble getting this message across to politicians and team owners with the financial and political resources to push through public subsidies to build large-scale sports venues. Proponents often argue that new money is generated, creating jobs and tax revenue. But this stream of thought is problematic from the outset – how is this “new” money generated? Most families have entertainment budgets, and the \$100 they would spend going together to the circus is \$100 that they don't spend on miniature golf or a zoo visit later in the month. Circus or no circus, that \$100 gets spent in the local economy anyway, so the event does not generate any new economic impact. It has simply transferred it. The only way that the loss of a circus electing to discontinue shows in the state, due to passage of legislation to prohibit

⁵ “Academic studies of the economic impact of professional sports facilities... have generally found either no evidence of positive economic benefits, or evidence of a negative economic impact.” Coates, Dennis and Brad Humphreys, “Voting on Stadium and Arena Subsidies,” March 7, 2002 (http://www.umbc.edu/economics/seminar_papers/brown_new.pdf). For a succinct discussion, see also Noll, Roger and Andrew Zimbalist, “Are New Stadiums Worth the Cost?” *The Brookings Review*, Summer 1997, Vol. 15 No. 3, Pages 35-39.

certain training devices utilized on elephants, would have any economic impact whatsoever is if all the spending associated with the circus event never takes place in the local economy at all.⁶

It might be plausible to argue that the economic activity associated with circus events would evaporate from the region if it turns out that a significant proportion of circus goers are coming into the state to attend the circus from elsewhere. If tourists are not otherwise attracted to a particular state, they may stay in their home state and spend their money there. Without data, it is difficult to know for certain, but it is highly unlikely that a significant number of circus goers are out-of-state tourists.⁷ Ringling Bros. and Barnum & Bailey Circus (“Ringling”) itself schedules stops each year in numerous cities across the country within close proximity of each other. For example, if you live in Massachusetts you have a choice to see the Ringling circus in Boston, Worcester, Providence, and Manchester. Thus it is reasonable to conclude that the willingness to travel for such events is limited to a short distance, and hence that most audiences are made up of residents, not tourists.⁸

Any finding of economic impact relies on an assumption that there is or would be nothing to fill the void left by the traveling shows or circuses exhibiting elephants, should such exhibitors elect not to tour in a particular state. But there are many options for residents wishing to entertain their families on a budget comparable to that needed for

⁶ How can a handful of nights of the circus create economic impact if most economists agree that the arena in which the circus operates doesn't? (See, e.g., Reich, Brian, “Baseball and the American City: An examination of public financing and stadium construction in American professional sports, April 30, 2001, <http://www.stadiummouse.com>, “There is virtually no evidence to demonstrate that such spending has had anything but a negligible impact on employment, tax revenues, and regional income.”)

⁷ The opportunities to attend circus events including wild and exotic remain plentiful. For example, Ringling has three units that travel simultaneously across the country to 44 states and the District of Columbia.

⁸ See Exhibit 2 for a list of 2008 Ringling performance dates.

attendance at circus events. In every market that is visited by traveling circuses such as Ringling, there are many venues and events for families in the price range comparable to the circus events all across the country.

The owners and performers of traveling shows and circuses performing in a particular state do not reside in the state where they are performing with the exception of the entities home state.⁹ When the circus leaves town, it takes its performers and its profits out of the state, thus limiting the economic benefits of such shows to the state in which the performance is.¹⁰ From an economic perspective, family spending would create more economic impact if spent on local attractions instead of traveling shows. The owners and employees of local amusement and recreation attractions live in the same state and therefore spend their incomes locally, paying sales tax on their purchases and paying income tax to the state.

The Show Will Go On

Legislation which seeks to prohibit certain training devices utilized in traveling circuses does not prohibit any exhibition of or travel with elephants within any given state. The bill bars the possession or use of implements that “may reasonably result in harm to the elephant including, but not limited to, the damage, scarring or breakage of

⁹ The main circuses that are known to have tour across the country with elephants include: Ringling (based in Vienna, VA), Carson & Barnes (based in Hugo, OK), Cole Bros (based in Deland, FL) and R W Commerford & Son Inc (based in Goshen, CT).

¹⁰ Economists refer to this as the “leakage” of funds from a local economy. “The money that stays in the community is taxed over and over again as it is exchanged for goods and services, but the money that flees elsewhere is no longer taxed by the local government.” (Marasco, David, PhD, “Leaky Stadiums - Milwaukee's Stadium Experience,” <http://www.thediamondangle.com/marasco/opan/leaky.html>)

an elephant's skin.”¹¹ The legislation also seeks to limit the use of chains to restrain an elephant, “except if utilized for the shortest amount of time necessary to provide actual medical treatment.”¹² Passage of this type of legislation would have no direct economic consequences for local economies that presently host traveling elephant displays, since all that is limited by the bill are training and restraint methods.

This type of legislation is modest when compared to other policy approaches to elephant displays – approaches which themselves have produced no known adverse economic impacts. To date, 29 municipalities across the country have prohibited the performance or display of wild and exotic animals in circuses and traveling shows within their borders.¹³ None of these towns have reported any economic losses as a result of the prohibition. Concern about the public health, safety and animal welfare issues associated with the public display of wild and exotic animals in traveling shows and circuses is growing across the country, with many cities choosing to address the issue through the ordinance process.

Further, although to date no state has taken the step of banning the public display of wild and exotic animals, there is a trend toward introduction of state legislation that would either prohibit the display of certain species commonly utilized in circuses and traveling shows, or set state-specific standards for how these animals are trained and treated while performing. States like Connecticut, California, Massachusetts, Nebraska, and Rhode Island have held hearings to evaluate the

¹¹ State of Massachusetts, Senate No. 2002, “An Act Relating to the Treatment of Elephants,” <http://www.mass.gov/legis/bills/senate/185/st02/st02002.htm>, accessed on October 15, 2007. This language is model language that has been used in other states such as Connecticut and California.

¹² *Ibid.*

¹³ Note the legislation described herein is far less restrictive than the 29 municipal ordinances – not prohibiting any animal act, but limiting the use of specific implements or devices used to train or restrain an elephant. Please see http://www.bornfreeusa.org/b4a3_circuses_and_shows.php.

appropriateness of wild and exotic animals as performers in traveling entertainment events.¹⁴ And across the Atlantic, in late 2006, the Rural Affairs Minister of Scotland introduced a ban on the exhibition of wild and exotic animals in circuses, after similar legislation passed in England and Wales.¹⁵

Circuses featuring only human performers are gaining in popularity across the country. These shows feature acts of human ingenuity, physical prowess, daring and talent. Nearly 30 wild and exotic animal-free circuses perform throughout the United States.

The most popular of these shows, Cirque du Soleil, describes itself as “based on a totally new concept: a striking, dramatic mix of the circus arts, street entertainment, featuring wild, outrageous costumes, staged under magical lighting and set to original music. With not a single animal in the ring...”¹⁶ Cirque du Soleil reaches audiences across the country, with six traveling and six resident shows. More than 70 million people (including 10 million expected during 2007 alone) have seen a Cirque du Soleil show and since 1984, the shows have made almost 250 stops in nearly 100 cities around the world.¹⁷

Another popular show is the Big Apple Circus which was established in 1977 and stopped touring with wild and exotic animals in July 2000. According to a company spokesperson, the circus has continued to be successful witnessing no observable

¹⁴ During the 2006 through 2008 legislative sessions the states of California, Connecticut, Massachusetts, Nebraska, and Rhode Island introduced and debated legislation addressing the display of wild and exotic animals as well as whether these animals are humanely treated.

decline in attendance.¹⁸ The circus prides itself in only partnering “with animals that have a traditional working relationship with man... We continue to explore and address the needs of our performing animal partners and insist upon sensitivity to quality of life both in and out of the ring for all of our performers.”¹⁹

Traditional Circuses Re-think Animal Use

There is also evidence to indicate that even the traditional circuses are recognizing the potentially higher profitability resulting from showcasing interesting human acts rather than animal acts. After all, Cirque du Soleil’s “Ka” show in Las Vegas is reported to have earned a 35 percent profit margin on its 2005 revenues of \$90 million.²⁰ Some traditional circuses have already taken the step of dropping animal acts from their shows, while others, in response both to competition and profitability, have changed their strategies to focus less (or not at all) on animal acts.²¹

In 2005, the Moscow State Circus purchased the rights to the name of Circus Vargas, when the traveling show featuring animal acts “folded up its tent.” Circus Vargas was “reborn as an animal-free, Latino-themed one-ring circus” that had its first performance in San Diego, California in mid-October of 2005.²² The show, delivered entirely in Spanish, features an aerial motorcycle act. Acrobats, trapeze artists, contortionists, daredevil stunt performers, aerialists and clowns round out the show’s

line up. There are no public reports indicating that the new Circus Vargas is any less popular than when animals were showcased.

In 2004, the Cole Bros. circus, a 121 year-old traveling show, eliminated its use of elephants, lions and tigers, citing the “expense of meeting animal welfare standards... [as] a losing venture.”²³ The current show focuses on acrobats, a high wire motorcycle team and performers dressed up as comic book movie heroes.²⁴

According to a number of media accounts, Cole Bros.’ revenue did not suffer for making these changes. A May 2005 article reported that advance ticket sales for the four evening performances in Vineland, New Jersey were the highest amount in the prior five years.²⁵ This trend was also observed when Cole Bros. traveled to St. Louis, Missouri on its 2005 animal-free tour. Cole Bros. reported that the circus had its “best year...in a long time” and “can put on as good or better show without the exotics.”²⁶ Cole Bros. observed that children “no longer care much for exotic animals,” rather that they appreciate “action... fast moving lights, fast moving music.”²⁷ The leader of the local Kiwanis club concurred, stating that “advanced sales for the circus have done well,” and that the comic book heroes and other attractions will “appeal to children probably even more than the animals.”²⁸

Finally, a *Wall Street Journal* article from mid-2005 described the trend toward branded clown acts, even among the largest circuses. A “headliner clown strategy” emerged in the early 1990s, when “some of America’s roughly 40 circus companies

²³ “Circus reflects changing times; gone are tigers, hello kitty,” *The Gazette* (MD), April 27, 2005.

²⁴ According to its web site, Cole Bros. has re-introduced elephants into its 2006 touring show.

²⁷ *Ibid.*

²⁸ *Ibid.*

started worrying about flat sales. At that time, circuses were generally building their shows around traditional acts like lion tamers and trapeze artists.”²⁹ The circus was facing strong competition, from new traveling children’s entertainment shows such as The Wiggles, Barney and Rugrats, resulting in a loss of revenue for the traditional circuses. On the cost side of the ledger, even costly clowns are less expensive to maintain than wild and exotic animals. According to the news account:

...a newborn elephant can cost about \$100,000 to buy, plus annual costs of \$11,000 to feed, \$7,500 to care for, \$7,500 to insure and \$20,000 to transport (Ringling has 22 performing elephants among its three troupes.) By contrast, annual salaries for clown-alley clowns generally run from \$15,000 to \$40,000. For most circuses, roughly 20 percent of the overall budget goes to insurance – and rates for exotic animals have more than doubled in the past five years, according to circus insurer Mitchel Kalmanson.³⁰

In response to this cost structure, Ringling and other circuses have reduced the number of animal acts in their shows. According to the *Journal* article, in 1965, Ringling employed 65 such acts; by 1995, that had dropped to 22 and in 2006 it presented just 16.³¹

It is also worth noting that several circuses have struggled to meet the USDA’s minimum care requirements for exhibiting wild and exotic animals. While violations of the Animal Welfare Act may not be economic *per se*, the fundamental failure to provide appropriate care at issue in such cases is invariably tied to the high costs of doing so. Caring for and treating wild and exotic animals properly is an expensive endeavor and one that is not always profitable for the traveling shows. For example, in 2004 The Hawthorne Corporation, which owned traveling circus elephants, was ordered by the

²⁹ “The Power Clown,” *Wall Street Journal*, August 12, 2005.

³⁰ *Ibid.*

³¹ *Ibid.*

USDA to pay a \$200,000 civil penalty for failure to properly care for the animals and ordered to transfer its sixteen elephants to persons who could properly provide care for the animals.³² In addition, in 2004, the Walker Bros. Circus was fined \$25,000 and lost its elephant exhibition license for five years after admitting to 18 violations of the Animal Welfare Act, including failure to provide veterinary treatment for ailing elephants on several occasions.³³

If present trends continue, there is no reason to conclude that elephant acts are a necessary component for children's entertainment to be a profitable venture.

Conclusion

For all of the reasons discussed herein, a state will not experience any economic loss associated with passing legislation seeking to prohibit certain training devices utilized on elephants in traveling shows. The bill does not prohibit any amusement vendor from displaying elephants in the state. However, if parties affected by such legislation elect not to operate in state where legislation such as this has passed, spending on similar amusement activities will offset that spending, or else family spending may shift from touring events to resident events and activities – which would lead to a net positive impact as more (or all) of the revenue generated is spent in-state. The departure of any affected parties will create more demand for alternative children's entertainment and there is no shortage of shows that would find it profitable to tour in

³² Thirteen of the elephants were transferred to two elephant sanctuaries: The Elephant Sanctuary in Tennessee and the Performing Animal Welfare Society in California.

³³ In 2004, the Walker Bros. Circus settled with the U.S. Department of Agriculture on multiple counts of violating the Animal Welfare Act between 2001 and 2002. Among the 18 violations, Walker Bros. was found to have caused physical harm and discomfort to animals and to have failed to provide veterinary care for elephants.

the state or expand their current offerings. The fact that the market – driven by both the increasing demand for non-animal entertainment and the higher costs (and therefore reduced profitability) of animal acts – is moving in the same direction, only further insulates the state from any possible negative economic impact of this type of legislation.
